

Tunnelling and Tunnel Mechanics: A Rational Approach to Tunnelling (Hardcover)

by Dimitrios Kolymbas (Author)

Hardcover: 437 pages

Publisher: Springer; 1 edition (September 26, 2005)

Language: English

ISBN-10: 3540251960

ISBN-13: 978-3540251965

The book covers not only practical aspects but also the underlying theoretical approaches. It also covers the fundamentals of rock mechanics. It addresses not only students but also professionals who are interested to understand the underlying principles and methods and – possibly – to further develop them. Emphasis is given to the mechanical approach rather than to hardly tractable empirical statements. The text is concise and as far as possible complete and comprises a large list of citations. Publications of the English and German speaking scientific communities have been taken into account.

Contents

Part I Design

1	Introduction	3
1.1	Benefits from tunnelling	3
1.2	Statistical review	3
1.3	Notations in tunnelling	6
1.4	Cross sections	7
1.4.1	Road tunnels	15
1.4.2	Rail tunnels	17
1.5	Alignment	18
1.6	Underground water conduits	20
1.7	Standards and Recommendations	22
1.8	Costs	24
1.9	Planning and contracting	25
1.9.1	Cost and time management	28
1.9.2	Experts	29
2	Installations in tunnels	31
2.1	Installations for traffic control	31
2.2	Installations for telecommunication	32
2.3	Ventilation	32
2.3.1	Ventilation during construction	32
2.3.2	Design of construction ventilation	35
2.3.3	Ventilation of road tunnels	37
2.3.4	Control of ventilation	41
2.4	Fire protection	42
2.4.1	Fire-resistant concrete	45
2.4.2	Fire detectors and extinguishers	46
2.4.3	Example: Refurbishment of the Montblanc tunnel	48
2.5	Illumination of road tunnels	49
2.6	Drainage	52

X Contents

2.7	Examples for the equipment of modern road tunnels	53
2.8	Rating of safety in road tunnels	55
3	Investigation and description of the ground	57
3.1	Geotechnical investigations	57
3.1.1	Preliminary investigation	58
3.1.2	Main site investigation	59
3.1.3	Investigation during and after construction	59
3.2	Site investigation	60
3.2.1	Exploration drilling	62
3.3	Geophysical exploration	64
3.4	Joints	64
3.5	Weathering	69
3.6	Rock rating and classification	69
3.6.1	RMR-System	70
3.6.2	Q-system	71
3.7	Reports	72
4	Heading	75
4.1	Full face and partial face excavation	75
4.2	Excavation	80
4.3	Drill & blast	84
4.3.1	Drilling of blastholes	85
4.3.2	Charging	86
4.3.3	Tamping	86
4.3.4	Ignition	86
4.3.5	Distribution of charges and consecution of ignition ...	87
4.3.6	Explosives	88
4.3.7	Explosive consumption	89
4.3.8	Safety provisions	89
4.3.9	Ventilation	90
4.3.10	Backup	90
4.3.11	Shocks and Vibrations	90
4.4	Shield heading	92
4.4.1	Shield heading in groundwater	103
4.4.2	Tunnelling with box- or pipe-jacking	109
4.4.3	Microtunnels	110
4.4.4	Speed of advance	111
4.4.5	Drive-in and drive-out operations	112
4.4.6	Problems with shield heading	112
4.5	Comparison of TBM with conventional heading	114
4.6	Rock excavation	115
4.6.1	Drilling of boreholes	116
4.6.2	Rock excavation with disc cutters	118

4.6.3	Abrasion	124
4.6.4	Drilling: history review	125
4.7	Profiling	126
4.8	Mucking	127
5	Support	131
5.1	Basic idea of support	131
5.2	Shotcrete	132
5.2.1	Steel fibre reinforced shotcrete (SFRS)	136
5.2.2	Quality assessment of shotcrete	137
5.3	Steel meshes	137
5.4	Rock reinforcement	137
5.4.1	Connection with the adjacent rock	138
5.4.2	Tensioning	142
5.4.3	Testing	143
5.4.4	Application	143
5.5	Timbering	144
5.6	Support arches	146
5.7	Forepoling	147
5.8	Face support	149
5.9	Sealing	149
5.10	Recommendations for support	150
5.11	Temporary and permanent linings	152
5.12	Permanent lining	153
5.12.1	Reinforcement of the permanent lining	154
5.12.2	Quality assessment of the lining	155
5.13	Single-shell (monocoque) lining	156
6	Grouting and freezing	159
6.1	Low pressure grouting	159
6.2	Soil fracturing, compensation grouting	161
6.3	Jet grouting	163
6.4	Grouts	163
6.5	Rock grouting	166
6.6	Advance grouting	168
6.7	Soil freezing	168
6.7.1	Frost heaves	169
6.8	Propagation of frost	170
7	The New Austrian Tunnelling Method	171
7.1	HSE Review	173

XII Contents

8	Management of groundwater	177
8.1	Flow within rock	177
8.1.1	Porosity of rock	177
8.1.2	Pore pressure	178
8.1.3	Permeability of rock	179
8.2	Inflow in the construction phase	181
8.3	To drain or to seal?	183
8.4	Drainage	183
8.5	Water ingress into a drained circular tunnel	187
8.5.1	Seepage force	189
8.6	Influence of drainage	190
8.7	Sealing (waterproofing)	191
8.8	Geosynthetics in tunnelling	195
9	Application of compressed air	197
9.1	Health problems	199
9.2	Influence on shotcrete	201
9.3	Blow-outs	201
10	Subaqueous tunnels	203
10.1	Towing and lowering method	204
10.2	Caissons	206
11	Shafts	211
11.1	Driving of shafts	211
11.2	Earth pressure on shafts	214
12	Safety during construction	217
12.1	Health hazards	217
12.2	Electrical installations in tunnelling	221
12.2.1	Hazards due to failure of vital installations	221
12.2.2	Special provisions	221
12.2.3	Energy supply of excavation machines	222
12.2.4	Illumination during construction	223
12.3	Controls	223
12.4	Risk management	224
12.5	Emergency plan and rescue concept	225
12.6	Quantification of safety	226
12.7	Collapses	226
12.7.1	Heathrow collapse	229

Part II Tunnelling Mechanics

13 Behaviour of soil and rock	235
13.1 Soil and rock	235
13.2 General notes on material behaviour	235
13.3 Elasticity	237
13.4 Plasticity	239
13.5 Strength	240
13.5.1 Strength of soil	240
13.5.2 Strength of rock	243
13.5.3 Brittle and ductile behaviour	246
13.6 Post-peak deformation	248
13.6.1 Point load test	249
13.6.2 Griffith's theory	250
13.6.3 Acoustic emission	251
13.6.4 Friction of joints	251
13.7 Anisotropy	252
13.8 Rate dependence and viscosity of soil and rock	253
13.9 Size effect	256
13.9.1 Size effect in rock	256
13.9.2 Size effect in soil	258
13.9.3 Rodionov's theory	258
13.10 Discrete models	260
13.11 Rock mass strength	261
13.12 Swelling	265
13.13 Field tests	267
14 Stress and deformation fields around a deep circular tunnel	271
14.1 Rationale of analytical solutions	271
14.2 Some fundamentals	271
14.3 Geostatic primary stress	276
14.4 Hydrostatic primary stress	279
14.5 Plastification	281
14.5.1 Consideration of cohesion	284
14.6 Ground reaction line	285
14.7 Pressuremeter, theoretical background	288
14.8 Support reaction line	289
14.9 Rigid block deformation mechanism for tunnels and shafts	290
14.10 Squeezing	293
14.10.1 Squeezing as a time-dependent phenomenon	293
14.10.2 Neglecting time-dependence	295
14.10.3 Interaction with support	297
14.10.4 Squeezing in anisotropic rock	301
14.11 Softening of the ground	301

XIV Contents

15 Supporting action of anchors/bolts	305
15.1 Impact of pattern bolting	306
15.1.1 Ground stiffening by pre-stressed anchors	307
15.1.2 Pre-stressed anchors in cohesive soils	309
15.1.3 Stiffening effect of pattern bolting	311
16 Some approximate solutions for shallow tunnels	313
16.1 Janssen's silo equation	313
16.2 Trapdoor	316
16.3 Support pressures at crown and invert	319
16.4 Forces acting upon and within the lining	325
16.5 Estimations based on the bound theorems	327
16.5.1 Lower bound of the support pressure	327
16.5.2 Upper bound of the support pressure	328
17 Stability of the excavation face	329
17.1 Approximate solution for ground with own weight	329
17.2 Numerical results	330
17.3 Stability according to the bound theorems	330
17.4 Stand-up time of the excavation face	333
18 Earthquake effects on tunnels	335
18.1 General remarks	335
18.2 Imposed deformation	336
19 Settlement of the surface	339
19.1 Estimation of settlement	339
19.2 Reversal of settlements with grouting	344
19.3 Risk of building damage due to tunnelling	344
20 Stability problems in tunnelling	349
20.1 Rockburst	349
20.2 Buckling of buried pipes	349
20.2.1 Buckling of pipes loaded by fluid	350
20.2.2 Buckling of elastically embedded pipes	352
21 Monitoring	353
21.1 Levelling	354
21.2 Monitoring of displacements and convergence	354
21.3 Extensometers and inclinometers	355
21.4 Monitoring stresses within the lining	357
21.5 Measurement of primary stress	360
21.5.1 Hydraulic fracturing	360
21.5.2 Unloading and compensation methods	362
21.6 Cross sections for monitoring	363

22 Numerical analysis of tunnels	365
22.1 General remarks	365
22.1.1 Initial and boundary conditions.....	366
22.1.2 Coping with non-linearity.....	368
22.1.3 Constitutive equation	370
22.2 Method of subgrade reaction	371
22.3 Difficulties related to the design of shotcrete lining	373

Part III Appendices

A Physics of detonation	379
A.1 Detonation.....	379
A.2 Underground explosions	381
A.3 Interaction of charges	382
B Support of soil with a pressurised fluid	385
C A simple analytical approximation for frost propagation	387
D Rigorous solution for the steady water inflow to a circular tunnel	393
E Aerodynamic pressure rise in tunnels	397
F Multiphase model of reinforced ground	399
G Deformation of a tunnel due to seismic waves	403
H A rational approach to swelling	405
Glossary	409
9.1 English - German	410
9.2 German - English	419
Index	429
